YOUR PET & WATER

Water consisting in body of dogs & cats are 60%~80%
Know how much your pet drink and keep your pet stay healthy!

To stay in good health, it is important to be in an environment where fresh and clean water is available at all times. The amount of water that should be taken to maintain your pet's health is known to be 2.5 times the amount dry foods your pet eats. (not including moisture in foods)

This shall depend on the amount of moisture the food includes, along with temperature and exercise volume. Please note that mineral water which human beings take includes minerals such as magnesium and needs attention when giving to your pet.

When you wish your pet to drink more water

Place it at your pet's favorite position

Replace water frequently and keep it fresh at all times

Choose a wide container so that whiskers do not touch container

■ Required amount of water for dog in a day

pet's weight	Required amount of water
2kg	190mL
3kg	260mL
4kg	320mL
5kg	370mL
6kg	430mL
7kg	480mL
8kg	530mL
9kg	580mL
10kg	630mL
15kg	850mL
20kg	1060mL
25kg	1250mL
30kg	1440mL
35kg	1610mL
40kg	1780mL

■ Required amount of water for cat in a day

pet's weight	Required amount of water
2kg	140mL
3kg	190mL
4kg	240mL
5kg	280mL
6kg	320mL
7kg	360mL
8kg	400mL
9kg	440mL
10kg	470mL

* Amount includes water taken from foods

GX928139
Pure Crystal Glassy R 1.5L
for Cat - USB

Transparent like glass. Choose from three water flows that pique your cat's interest: "flowing", "accumulating" and "spilling", and the round shape allows your cat to drink from any angle. A first in Pure Crystal history! Adopts a cordless pump and tank that are easy to clean.

Cordless pump adopted

● The cord does not hang down from the tank, making it easy to clean.
● Quiet design

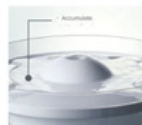

Peace of mind even if something happens

Water remains in the funnel even if the electricity is cut off.

Designed exclusively for cats

● Funnel shape suitable for cats to drink water by licking it.
● 3 ways to drink according to your preference [attachment included]

electric bill

1 month
Approximately
46 yen (for 1kWh 27 yen)

Clear guard that prevents water from splashing and allows you to clearly see your dog's face

Safety design that notifies you of low water level with a lamp and automatically stops

Safety and security

DRINK DISH

This slim bowl for playpens and cages keeps fur from getting wet! Drinks more than with a nozzle! Increases water intake by 25%! Ideal for long-haired or short-eared pets! The slim bowl prevents fur and floppy ears from getting caught in the bowl, reducing water intake. The bottle and bowl can be removed with one hand, making water changes and cleaning a breeze! This dish-type bowl is safe for dogs and cats who don't like nozzle-type bowls. Attach to a dog or cat playpen or cage or a dedicated drinking stand. The natural position makes drinking easier than with a nozzle-type bowl, contributing to increased water intake.

CAT FEEDER DISH

Simply place PON! in a dish filled with water! This cat-shaped ceramic plate softens your cat's water. One piece lasts for about a month. Simply submerge PON in the dish. It reduces the magnesium and calcium in tap water, making it gentler on your cat's body (soft water). Simply rinse it with water when changing the water and it's ready to use.

*Do not use detergent when washing PON in the dish.

Maintain a healthy lower urinary tract!
Transform daily water into gentle, soft water.

[Easy Installation!] Simply attach the cat-shaped cartridge to the bowl to reduce the magnesium and calcium in tap water, creating gentle, soft water!

[Natural Drinking Position!] The raised legs allow for a natural drinking position. Includes non-slip silicone.

[Kitty Water Wave] The inner ribs create waves as your cat licks, efficiently softening the water. The inner ribs create natural ripples as your cat licks. This creates the "Kitty Water Wave," making the water easier to drink.

[Easy Cleaning] The cartridge can be removed and the bowl is dishwasher safe. Microwave safe.

[Cartridge Replacement Frequency] The cartridge's effectiveness lasts for approximately 30 days. Replace with a new one every 30 days.

FILTER

Pure Crystal •Water softening filter•

To maintain health, be sure to replace the filter every month.

Upgraded activated carbons

	Regular activated carbon	Antibacterial activated carbon
Absorbency Absorbs smell of chlorine and removes chlorine	○	○
Antibacterial effect Antibacterial act against common bacteria	×	○

Antibacterial activated carbon prevents germs to increase and keep water clean. Pure Crystal uses antibacterial activated carbon to bring your pet clean water.

Clean and delicious

STAYS extra clean and delicious

What are raw material of activated carbon?

There are charcoal, coconut shell, coals, rayon, and phenolic resin, and produce powdered activated carbon, granulated activated carbon, fibrous activated carbon, and molded active carbon.

Coconut shell	Coal	Charcoal	Rayon

Only activated carbon made of coconut shell is used for Pure Crystal!

Coconut shell activated carbon is made in Japan and used for refining tap water (for human). It is produced by Japanese manufacturer under strict management and with steam activation, and is high qualified activated carbon with less impurities and suits standards of food and food additives. This is what also Japanese drink manufacturers use. For your information, only "Shell" indicated in left image is used for activated carbon made of coconut shell.

Two features of Ion filter

Ionic (ion exchange resins)

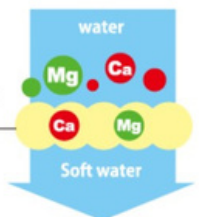

Ionic (ion exchange resins) removes Mg and Ca from tap water which is the cause of hardness and softens the water

Pure Natural (high quality activated carbon)

Pure Natural (high quality activated carbon) and non-woven fabric catches hair and left over food while adsorbing chlorine smell.

Mechanism of water softening

Ionic (ion exchange resins)

Test results

Filter media which makes water clean and fresh. Includes two type of activated carbon adsorbing chlorine odor from tap water. Non-woven fabric catches hair and other particles leaving water clean and hygienic. Filter media comes in two pieces, one for approximately one month.

Test results

How does water be clean?

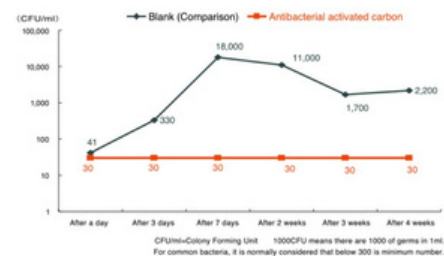

Consist two types of activated carbon, with instant effectivity and durability

Experiment

Tested for 4 weeks Using antibacterial activated carbon filter on "Pure Crystal for Puppy". Collect water after a day, 3 days, and once a week after 3 days. Measure quantities of common bacteria and compare water with antibacterial activated carbon and blank.

(*Change water every day, and does not wash the unit)

As a result, it is clear that antibacterial activated carbon shows its effect on 4 weeks long compare to blank.
