BIOEARTH

Made by Nature, Made for Nature.

What is BIOEARTH?

Refresh your aquarium/pond with BIOEARTH. Made by Nature, it consists of more than 90% calcium montmorillonite clay. This hi-purity clay has been one of Nature's miracle, are among the highest and richest natural forms of mineral elements on earth. Also known as the 'living clay', it is edible and consists of no less than 67 minerals, essential to the functions of organs and reproduction of enzymes in the body.

How does it work?

BIOEARTH binds with many positively charged (+ve) toxins like a magnet. Bacteria, toxins, wastes, are prone to BIOEARTH's attraction (adsorption). Clay particles are also able to draw substances into their inner layers, swelling each particle the more it absorbs, (absorption) and hence easier to remove in the filter. BIOEARTH provides many essential minerals to the water benefiting both the fishes and plants. BIOEARTH can be used in both freshwater and marine systems with a lot of benefits. It improves and stabilizes the water quality, polishing the water, removes chemicals, medicine residue, chlorine, heavy metals, ammonium and many other contaminants, allow young fries to grow better, destress fish, neutralizes harmful bacteria, promotes breeding, skin/scale luster & colour improvement of fishes, protects the slime on their body etc. Furthermore, by bathing fishes and feeding them with BIOEARTH clay, it helps the fishes to grow both in mass and weight, aiding digestion, making them healthy and resistance to diseases. Such benefits are finally made available to professional fish keepers and hobbyists by using BIOEARTH. With regular use, your fish will experience improved health, better skin luster and enjoy better water quality, and living in a clean, close-to-nature, stress-free environment. BIOEARTH is a high purity, all natural calcium montmorillonite clay! Made By Nature. Made for Nature.

How much to use?

Add about 1 gram (one spoonful) to every 100 litres of water weekly. Mix well with aquarium/pond water before applying. You will notice that the water will turn cloudy initially but will result in much cleaner and clearer water in a few hours. Use BIOEARTH preferably at night so that you will enjoy the clear water the next morning. If you are showing your fish at a show or competition, repeat dose thrice weekly and increase dosage by 50% each time.

Use with food

When using BIOEARTH to mix with fish food, add 1 gram (one spoonful) to a mixing bowl with some water and fish food. Allow the food to be soaked with BIOEARTH solution. Not only will the fish get all the nutrients, other impurities like fungus, bacteria that maybe found in the food will be removed.

What should I take note of?

There are different types of clay in the market. Only calcium montmorillonite clay are edible clay. As such, please do not use products which you are not certain of. Some clay may contain certain percentages of calcium montmorillonite but have higher levels of impurities. BIOEARTH is a high purity calcium montmorillonite clay powder of 90% and above.
