

# Eco Wood Litter & Scoop

PeeWee wood pellets are made of pure sawdust from Swedish-grown Norwegian spruce and Scots pine with no bark or leaf. The sawdust is a by-product of FSC-approved forestry in northern Sweden, where trees grow more slowly due to the cold, creating a special wood structure – the structure to which the PeeWee pellets owe their specific properties. The sawdust is compressed into pellets in a unique process without the use of glue or any chemical additives. That makes PeeWee pellets 100% natural and 100% sustainable. In addition, the pellets are impervious to mould and frost. PeeWee wood pellets have the unique characteristic of neutralising the smell of ammonia and absorbing considerably more moisture than any other cat litter on the market – up to 15 times their own volume!

- ✓ PeeWee wood pellets are safe for cats & people alike and good for the environment: the pellets are produced from 100% renewable raw materials and are 100% biodegradable.
- ✓ The sawdust and pellets don't stick to paws: that's better for your cat and rids your home of soiled cat litter dust!
- ✓ The unique ammonia-absorbing properties neutralise the smell of urine. A single wood pellet absorbs up to 15 times its own volume. One bag of pellets will last for 3-4 months

# EcoBasic & EcoClassic

The PeeWee EcoBasic is a basic litter tray suitable for PeeWee Cat Litter. This open style litter tray is made out of environmentally friendly Polypropylene Plastic that is easy to clean and hygienic. For best results, use the PeeWee EcoBasic in conjunction with PeeWee wood pellets. PeeWee is a double tray system for easy disposal of waste and sawdusts. When the cat pees in the litter box, 90% of the urine drains through the sieve in the top tray into the bottom tray and the remaining 10% is absorbed by the pellets in the top tray. These then decompose into sawdust and also fall into the bottom tray when the cat starts digging.

- ✓ **No more urine smells.** The pellets in the top tray stay clean and dry: there's no need to replace them, just top them up and remove the poop using the scoop provided. That makes PeeWee so extremely economical to use. Just empty the sawdust from the bottom tray every few days and the PeeWee litter box will smell of freshly sawn wood again: incredible but true!
- ✓ **Proven combination that works.** PeeWee only works if the PeeWee litter box and PeeWee pellets are used together. NB: other brands of wood pellets may look the same but they do not have the unique properties of PeeWee wood pellets, which absorb up to 15 times their own volume and decompose into sawdust. That's why one bag of environmentally friendly PeeWee pellets lasts for up to four months!
- ✓ **Extremely economical to use.** PeeWee pellets are made of compressed sawdust from Swedish-grown Norway spruce and are extremely economical to use. All you need to do is regularly dispose of the sawdust in the bottom tray and refill the pellets in the top tray. Depending on the number of cats and the size of the PeeWee box, a 9 kg bag of PeeWee pellets will last up to four months!

# EcoMinor

The EcoMinor is the perfect open litter box for average sized cats. Available in attractive design colours. Smart double-layer design Meets high standards of comfort and durability. 2 trays Top tray with sieve, bottom tray in which the urine and sawdust is collected. Easy to use The wood pellets decompose when they come into contact with urine and the cat's digging then pushes them through the sieve, meaning only the bottom tray needs emptying. Clean, dry paws sawdust is dust-free and will not stick to your cat's paws and coat when it goes to the toilet.

- ✓ **No more urine smells.** The pellets in the top tray stay clean and dry: there's no need to replace them, just top them up and remove the poop using the scoop provided. That makes PeeWee so extremely economical to use. Just empty the sawdust from the bottom tray every few days and the PeeWee litter box will smell of freshly sawn wood again: incredible but true!
